

Scenario:

You are a young college student during the COVID-19 pandemic. You are at school Monday through Friday from 8:30 am to 2:30 pm. You find yourself wanting to work out but due to the gyms being closed as well as the expensive workout apps in the app market, you want to have a workout routine that is easy for beginners.

Task 1: Create an account using your google account and log in.

Task 2: Create a workout schedule while using the different buttons to look through.

Task 3: You found an instructor you'd love to keep up with! Try to follow them and leave a comment under one of their posts saying "I can't wait to try this!"

Notes:

What changes should you make to your application? (min 3 things)

- 1) There should be more accounts to use other than google and yahoo and microsoft.
- 2) There isn't a button that shows how to add a work out button.
- 3) Maybe try adding a continue button closer to the end of the little notes that are shown at the beginning to make it easier to move to the next screen.
- 4) Try to make it a bit easier to add comments, try adding a button next to each of the posts saying "add comment" so you don't have to actually click on the post.

What you need to keep the same for an application (min 3 things)

- 1) The layout of the app is done really well, it seems to flow seamlessly,
- 2) The app does have functioning navigation parts to get to the different instructors and other users.
- 3) The work outs are pretty short ranging from 5-10 minutes which would be helpful during crunch time.
- 4) The fact you can follow people and comment on their posts make it easier to find other people who are in the same spot as you.
